PROJECTS

- **An Android App for Children's Multilingual e-Magazine** Android/ iOS
Study Project Dec 2018 - present
 - **Supervisor:** Dr. Sukomal Pal, Associate Professor, IIT (BHU)
 - **Description:** India is a multi-lingual country where provinces are divided based on languages. People migrate across the provinces, and children are reared away from their home provinces, not getting the opportunity to learn their mother tongue properly. Although the children may speak and understand their mother tongue, the majority of them can not read and write in their mother tongue because the necessary script is not taught in school. We are developing a smartphone app that can transliterate the literary text from one's native language to Roman script (English is a lingua franca in India, and the Roman script is taught across the country). The app will display contents in both native script and Roman script so the user can follow and even learn the script.
- **Faster Biometric Authentication using NTRU** Aug 2017 - Jun 2018
M. Tech project and thesis
 - **Supervisor:** Dr. Y V Subba Rao, Associate Professor, University of Hyderabad
 - **Description:** This project is based on how fast we get authentication using biometrics. We take biometrics as a Binary Features Vector (BFV) and then use NTRU for encoding and authentication purposes. NTRU, a new public key cryptosystem based on Homomorphic Encryption. The security of the NTRU public key cryptosystem comes from the interaction of the polynomial mixing system with the independence of reduction modulo p and q (where p and q are small numbers, and there is no common factor).
- **Issue management system in Agile Methodology**
M. Tech (SE Lab) mini project

- **Supervisor:** Dr. Hrushikesh Mohanty, Professor, University of Hyderabad
- **Description:** It's a system tool for issue management in Agile Methodology. Agile Methodology believes in regular problem solving by requirement, design, development, and test engineers. Any of one raises an issue and responds to this person discussed on the problem and the solution to that action. The tool is web-enabled with GUI for each type of user. A user can raise an issue, propose, and carry out the solution, viewing the issue's status.

Application of Geocoding Spatial Query in Real Estate using Google map

M.Sc project

Jan 2016 - May 2016

- **Supervisor:** Dr. S. Sivasathya, Associate Professor, Pondicherry University
- **Description:** The project is An Application of Geocoding and Spatial Query in Real Estate. The system has a database application that facilitates all the users (only two types of users are there) of the system to interact with them and to view the information as per user requirements. It is a real estate portal for buyers and sellers who want to invest in the real estate business.

Many advanced modules use Google API. Users can find the exact location on Google Maps using different techniques. There would be features like login, registration, searching properties, and finding the nearest location based on a particular location point (latitude and longitude value).

Online Blood Bank

B.Sc project

Dec 2013 - Apr 2014

- **Description:** Nowadays, the lack of blood is the most significant problem in the world. Two types of users can use this, Donor and Seeker. If you are willing to donate Blood, you can register as a donor. If you want blood, you can register as a Seeker. Then you can find your nearest donor's information and address. Also, you can search for services like an ambulance or nurse. And register as an owner of an ambulance and nurse.
